

CardPointe Virtual Terminal

Bringing the power of payments to your computer.

How it works:

Accept payments anytime, anywhere, with the CardPointe Virtual Terminal – the easy-to-use browser-based app for desktop, laptop and mobile devices. In just seconds, accept an order over the phone or swipe/dip a customer's card via an integrated, lightweight USB magstripe reader.

With the CardPointe Virtual Terminal, every transaction is protected by CardSecure®, our proprietary tokenization and point-to-point encryption method for securing cardholder data. CardSecure safeguards your business and customers from data breaches by securing and then storing all card data in our hosted vault. This removes sensitive information from your system and replaces it with irreversible tokens.

Interchange Optimization

The Virtual Terminal processes Level II and Level III data so every transaction qualifies for the lowest interchange rate possible, reducing the cost of each payment processed.

Custom Receipts

Promote a special event or your social media account on your receipts, which can be printed or emailed to your customers. You can also customize customer profiles and transaction fields.

Real-Time Reporting

The Virtual Terminal is connected to the CardPointe platform, providing real-time access to robust, comprehensive reports on authorizations, funding activity and settlements.

Transaction Types

► Sell ► Verify ► Void ► Force Credit ► Refund
